

NOTICE:

Before purchasing a new computer to use with your new UNIKON electronic clock please read.

To communicate with the PROFI UNIKON clock, the computer must have a SERIAL PORT, preferably the standard COM PORT hardware. Alternately there are several USB to Serial adapters available but not all are compatible with UNIKON. We recommend FTDI UC232R-10 "ChiPi" or BELKIN model F5U409 (PDA adapter).

If you will be using the DOS administration program UNI.EXE, the computer **MUST** be equipped with a legacy type serial port hardware that can be configured as follows:

COM1 – 3F8 & IRQ4

or

COM2 – 2F8 & IRQ3
